pauljeon@college.harvard.edu · 781-999-2598 · linkedin.com/in/paul-j-jeon · github.com/pjeon18 · pjeon18.github.io/pauljeon

EDUCATION

Harvard College · A.B. in Computer Science, Secondary in Visual Studies

Expected May 2027

Coursework: Planning & Learning Methods in AI, Software Engineering with Generative AI, Data Science, Data Visualization, Data Structures & Algorithms, Probability

PRODUCTS

ISO, real-time dating app · solo (product, design, engineering)

2026

- Authored the product requirements and designed a 31-screen real-time dating application end to end, centered on a single enforced principle of one active conversation per user and documented in a standalone design specification.
- Engineered the full prototype in React, TypeScript, and Framer Motion, implementing the one-conversation constraint in the application state layer so it holds regardless of the interface.

Prep.io, live office-hours streaming platform · solo

2026

- Designed the end-to-end experience for a live streaming platform across desktop and mobile, producing user flows, wireframes, high-fidelity prototypes, and a shared responsive design system.
- Built the application in React and TypeScript, including a simulated real-time audience engine that drives live viewer counts, chat, and in-room participation.

Org Chart Explorer, internal tool for a BDR team · design and engineering

- Built a client-side web application converting a 699-employee HR export into a searchable reporting hierarchy, processing all data in-browser to satisfy a strict no-transmission requirement; deployed on the company's AWS infrastructure.

EXPERIENCE

AI Builder / AI GTM Intern, Onapsis · Boston

May 2026–Present

- Built an agentic prospecting pipeline in Google Apps Script integrating the ZoomInfo API to enrich and consolidate contact data, generating over 300 high-quality leads from a 13,000-record total addressable market across 47 target accounts.
- Engineered an LLM qualification layer (Gemini) that parses unstructured job titles and scores each contact against the ideal customer profile with a confidence rating for the business development team.

Procurement & Automation Manager, The Harvard Shop · Cambridge

Sep 2023–Feb 2025

- Managed procurement and inventory operations covering \$1.8M of stock across 1,100+ SKUs for three retail locations, an e-commerce storefront, and two warehouses.
- Developed a Python demand-forecasting model on the Lightspeed API to automate restocking decisions, contributing to 47% year-over-year revenue growth (\$370K) at a 65% margin.

PERSONAL PROJECTS

- **F1 Undercut Prediction.** Trained a weighted logistic regression on 761 hand-labeled race-telemetry samples to 0.71 AUC-ROC on pit-stop undercut outcomes (Python, pandas, scikit-learn).
- **YouTube Format Visualization.** Collected YouTube Data API metrics on short-form versus long-form output across major channels, published as an interactive d3.js visualization (API integration, data pipeline).
- **Pocket Tactics.** Turn-based strategy game with a headless TypeScript rules engine and peer-to-peer WebRTC multiplayer, no backend server (React, TypeScript, real-time networking).
- **PokéMAPs.** Daily geolocation game spanning 373 curated locations, deployed as a static React and TypeScript application (front-end development, data modeling, static hosting).

EXTRACURRICULARS

Harvard Korean Association (Designer & Publications Chair), The Harvard Crimson (Designer), Harvard Design Collective (Designer), The Harvard Shop (Product Designer), Harvard Korean Institute (Research Assistant).

SKILLS

Product: PRDs and specifications, roadmapping, user research, prototyping, A/B experimentation, product analytics, stakeholder communication, agentic AI for product workflows

AI & ML: LLMs and autonomous agents, prompt engineering, RAG, fine-tuning, confidence scoring and AI guardrails; PyTorch, TensorFlow, OpenAI, Anthropic, and Gemini APIs; Claude Code, Cursor

Data: SQL, Snowflake, pandas, NumPy, data pipelines and QA; CRM and GTM enrichment (Salesforce, ZoomInfo); Google Apps Script automation

Engineering & Design: Python, TypeScript, JavaScript, React, Tailwind, C/C++, Git; Figma, design systems, Adobe Creative Cloud
